Description

Provide a short description of the event and its activities.

In October a delegation of administrators and stakeholders from Szombathely visited Lecco. The activities organized for them included: a roundtable discussion about the management of the climate related issues in the two cities, like the district heating system, the energy community, the green protection plan, etc. The delegation also visited the waste-to-energy plant near Lecco for the recycle of waste. The participants showed interest, and had the possibility to meet their counterpart representative administrators for clarifications and to share. A public meeting was held in the city hall with web connection to launch the contest (rules, timing and assessment).

The final Action in Lecco was organised during the Festival of Sustainability, with the participation of students and teachers from Szombathely. The Hungarian students were hosted by their peers' families. They visited the schools and attended some lessons, attended a conference on 'The smart Land' (management of energy in a rural/ urban area). Together they did a basketry workshop and realised a simple basket. Finally, during a public event in front of administration representatives, journalists and public, they presented their projects.

The evaluating jury had selected the best and announced the winning team, who received a prize. All the participant students received a T shirt with the logo of the EU, the Commission and the two municipalities.
